## [The Hidden History Of Fluoride](#)

Gregg Prescott, M.S. | [BodyMindSoulSpirit.com](http://BodyMindSoulSpirit.com)  
September 26, 2016

50,556 VIEWS

Once you find out the hidden history behind [fluoride](#), you will never intentionally ingest it again! Fluoride is commonly found in water supplies and toothpaste, but you will also find it in processed foods made with tap water as well as in chemtrails. Fluoride is a toxic waste that is so poisonous that it cannot be dumped into the ocean or any water supply.

If you look at the back of any fluoridated toothpaste, you will find a warning saying that if you swallow a pea-sized amount of toothpaste, you are supposed to call the poison control center. According to Dr. Bill Osmunson, a “pea-sized” amount of fluoride is found in every small glass of fluoridated tap water.

The following is a shocking history of [fluoride](#). After reading this, many will agree that it the use of fluoride is incomprehensible and can easily be considered “crimes against humanity”.

**1931** Fluoride in drinking water is found to be the cause of brown teeth — now known as dental fluorosis.

**1931** H.Trendley Dean of the U.S. Public Health Service initiates studies on fluorides under the jurisdiction of Treasury Secretary Andrew Mellon. Mellon is founder of Alcoa aluminum, who is one of the main suppliers of toxic sodium fluoride as a by-product of aluminum manufacture. He publishes a purposely skewed study showing that, at 1ppm, fluoride results in the reduction of tooth decay.

**1940** Soviet concentration camps maintained by fluoride administration to inmates to decrease resistance to authority and induce physical deterioration.

**1942** Germany becomes world’s largest producer of aluminum (and Sodium Fluoride)

**1943** Researchers from the US Public Health Service examine the health of residents of Bartlett, Texas to see if the 8ppm fluoride in the drinking water was affecting their health. It was checked again in 1953. They find that the death rate in Bartlett was three times higher than a neighboring town which contained 0.4 ppm fluoride.

**1943** The Journal of the American Medical Association on September 18, 1943, states, “fluorides are general protoplasmic poisons, changing the permeability of the cell membrane by inhibiting certain enzymes. The exact mechanism of such actions are obscure. The sources of fluorine intoxication are drinking water containing 1ppm or more of fluorine, fluorine compounds used as insecticidal sprays for fruits and vegetables (cryolite and barium fluoro- silicate) and the mining and conversion of phosphate rock to superphosphate, which is used as a fertilizer. That process alone releases approximately 25,000 tons of pure fluorine into the atmosphere annually.”

**1944** The city manager of Grand Rapids, Michigan announces that the Michigan State Department of Health is planning a long range experiment with fluoridated water and that Grand Rapids was selected as the location for the experiment. The city commission approves a motion to fluoridate on July 31, and decide it is to begin in January 1945, despite the warning issued three months earlier by the American Dental Association. Grand Rapids becomes the first city in the United States to conduct this experiment. It was to serve as the test city to be compared against un-fluoridated Muskegon for a period of ten years relative to tooth decay, at which time it would be determined whether or not [fluoride](#) was “safe and effective.” Dr. H. Trendley Dean was put in charge of the project. The experiment was terminated early with the pronouncement that fluorides in public water supplies was “safe”. See 1945.

**1944** Oscar Ewing is put on the payroll of the Aluminum Company of America (ALCOA), as an attorney, at an annual salary of \$750,000. Within a few months, Ewing was made Federal Security Administrator, with the announcement that he was taking a big cut in salary. The US Public Health Service, then a division of the FSA, comes under the command of Ewing , and he begins to vigorously promote fluoridation nationwide.

*Ref: May 25-27 Hearings before the Committee on Interstate and Foreign Commerce.*

A by-product of aluminum manufacture is toxic. Ewing’s public relations strategist for the fluoride campaign was the nephew of Sigmund Freud, Edward L. Bernays. Bernays conducts a public relations campaign to promote fluorine ingestion by applying Freudian theory to induce public acceptance. It was one of Bernays most successful campaigns.

**1944** The Journal of the American Dental Association on October 1, 1944 warned that “We do know that the use of drinking water containing as little as 1.2 to 3.0 ppm of fluorine will cause such developmental disturbances in bones as osteoporosis, and we cannot run the risk of producing such systemic disturbances in applying what at present is a doubtful procedure intended to prevent development of dental disfigurement in children. In the light of our present knowledge or lack of knowledge of the chemistry of the subject, the potentialities for harm far outweigh those for good.”

**1945** Newburgh, New York has their water supply fluoridated. Subsequent exams of the children by x-ray reveal that almost 14% have cortical defects in bone, compared to the nearby unfluoridated town of Kingston, where 7.5% have bone defects.

**1945** As a result of government propaganda on fluorides, the ten year Michigan study was terminated after 1 year. The fluoride-free control city, Muskegon, was then fluoridated to conceal any differential between the two cities.

**1948** Study done in England where bone defects in three groups of school boys were studied. Two groups were from districts where the water supply was practically free of fluorine. The third group was from the town of Launton, where the natural water supply contains 1ppm of fluorine (the same as the level deemed “safe” by the U.S. Public Health Service). X-ray examination revealed that 20 percent of the first two groups had mild non-specific spinal irregularities. In the third group, the one consuming 1ppm [fluoride](#) in their water, 64% were found to have spinal defects, and lesions were more severe.

**1950** Soviets add fluoride to water in prison system to maintain subservience in the inmate population.

**1951** The U.S. Public Health Service, with the cooperation of the American Dental Association, holds a meeting of state dental directors at which the methods for promotion of fluoridation are outlined. A concentration of 1.2 ppm was suggested, and state dental directors were instructed to lie to the public about the toxic effects of sodium fluoride. They were to deliberately misinform the public by relating the presence of “high-fluoride areas” to “less cancer and less polio” — an entire public relations campaign meant to convince the public to allow themselves to be medicated.

**1952** The American Dental Association publishes an issue of its Journal instructing its dentists not to discuss their personal opinions about fluoride.

**1952** From 1952 to 1956, the cities on the “fluoridation list” began to fluoridate their water supplies. As the process of water fluoridation continued, the cancer death rate of the fluoridated cities began to far exceed the rate of the unfluoridated cities.

**1952** US Representative Dr.A.L.Miller, Chairman of the Special Committee on Chemicals and Foods, stated, “I sometimes wonder if ALCOA Aluminum and its subsidiaries might not have a deep interest in getting rid of sodium fluoride, a toxic waste product of the aluminum industry. In this connection it is interesting to note that the person in charge of the public health, Oscar Ewing, is also an attorney for ALCOA.”

**1952** 82nd Congress, 2nd Session, Hearings of the Select Committee to Investigate Use of Chemicals in Food and Cosmetics. Dr. Miller “The US Dental Association made some examination and recommended to the farmers that fluorine not be added to the water of pregnant sows because it did something to the pigs that were unborn”

Dr. Porterfield “There is more money available for matters that have economic value, than there is for health.”

**1954** A study is published which links fluorides and the development of cancer in animals.  
*Ref: A Taylor, “Sodium Fluoride in the Drinking Water of Mice”, Dental Digest, Vol 60, pp170-172.*

**1954** C.E.Perkins, I.G.Farben chemist, admits [fluoride](#) is to reduce resistance in people to authority.

**1956** March 1956 issue of the Journal of the American Dental Association, H.C. Hodge remarks, “skeletal deposition of fluoride is a continuing process in which a considerable portion of the ingested fluoride, perhaps 25 to 50%, is deposited in the skeleton.”

**1957** In a 1957 AMA report it was stated ” It is too early to know what the effects of artificial fluoridation will be. What is reported as a reduction in dental decay may in fact be a delay in recognition of decay, and reasons given for believing that artificially fluoridated water will have the same effects as water with natural fluoride are not valid.”

**1957** Records for New Britain, Connecticut (where the use of industrial fluorides had been in use for 6 years) showed that some of the children’s teeth had been damaged beyond repair where the water is fluoridated. Even when the percentage of industrial fluorine is kept at or below 1 ppm, mottling is produced in 10-15% of the children examined. Mottled teeth are teeth showing symptoms of fluorosis, and the enamel of mottled teeth is brittle and subject to mechanical injury which is

difficult or impossible to repair.

**1958** In October 1958, Dr. J.F. Montague, a medical doctor, published material reflecting his growing concern over fluoridation in the Journal of the International College of Surgeons, connecting the presence of fluorine in the human body to cancer.

**1958** An interesting piece of work was done by Dr. James Kerwin, a dentist, in which it was shown that the simultaneous presence of fluorine and strontium 90 in the human body may result in a greater accumulation of both substances in which compounds like strontium fluoride are formed. Because of the low solubility of these substances, the body has a very hard time getting rid of them. His report was published in Dental Digest in February 1958.

**1959** In the report of the proceedings of the 3rd Medical-Dental Conference on the Evaluation of Fluoridation, held on March 7, 1959 in New York City, the committee concluded that "It is apparent that the practice of fluoridation is not the simple, trustworthy procedure that the promoting authorities have given the profession and the public to believe.

Added to the lack of control of fluorides at the consumers tap are these major uncertainties: the gross variation in individual water consumption, the varied intake of fluorides in food and the [fluoride](#) intake from atmospheric and occupational exposure. These unpredictable issues make meaningless any talk about "controlled individual fluorine intake." Most, if not all of this research has been buried by the authorities, who maintain glibly that "fluoride compounds are safe in the water supply".

**1959** Fluorides were used as an enzyme inhibitor in a study by J.D. Ebert that was published in 1959 on the metabolic pathways by which organs in an embryo are formed. In low concentrations, he found that sodium [fluoride](#) blocked almost completely the regions destined to form muscle, primarily affecting the heart muscle. In higher concentrations, it caused the entire embryo to disintegrate in a clear-cut pattern, starting with the heart-forming region.

**1959** As early as 1959, the knowledge existed that the presence of fluoride in human bodies hastens the absorption of radioactive substances present in the environment. In a report to the Atomic Energy Commission's Division of Biology and Medicine entitled "*The Metabolism of Alkaline Earth Metals by Bone*" by F.W. Lengemann, professor of chemistry at the University of Tennessee on March 23, 1959, it was scientifically shown that the presence of fluorine and other environmental substances such as lead and cyanide in the human body increased the ratio of strontium 90 to calcium in bone.

**1959** The Ontario Minister of Health, Dr. Dymond, announced that no further fluoridation would be permitted there, because "no one knows for sure what the effect is to persons given fluoride throughout a lifetime."

**1959** In research conducted on the incidence of Mongolism in cities in Wisconsin, Illinois and the Dakotas published in 1959 in the official publication of the French Academy of Medicine, it was found that as the percentage of fluorides in the water rose, there was a parallel rise in the incidence of Mongoloid births.

The age of the mothers giving birth to Mongoloid babies also declined with rising fluoride levels. It is interesting that in the first three years of fluoridation, New Britain, Connecticut experienced a 150% rise in still births.

**1960** The American Dental Association issued a pamphlet for public consumption called Fluoridation Facts: Answers to Criticisms of Fluoridation. In defense of the use of toxic fluoride compounds in public water supplies (which is a grievous crime against humanity, since it means mandated involuntary public medication), they used the logic that "people have been known to live to a ripe old age" in areas where the water supply is fluoridated.

Unfortunately, they neglected to mention that the addition of [fluoride](#) to the water supply correlated directly with the number of still births, mongoloid children, brittle teeth and enlarged dental root structures, adverse spinal conditions, osteomalacia (softening of the bones) and osteoporosis (abnormally porous and spaced structure inside bone) in the medicated population as opposed to control populations that were unmedicated.

**1961** In Great Britain, Dr. R.A.Holman of the Royal Institute of Pathology discussed fluoride poisoning in an article in the April 15, 1961 issue of the British Medical Journal. He noted that the long-term effects of sodium fluoride ingestion needed much more investigation. He said "Fluoride is a well-known inhibitor of several enzyme systems".

**1963** A study is published which links fluorides and development of cancer in animals. Ref: Irwin Herskowitz and Isabel Norton "Increased Incidence of Melanotic Tumors...Following Treatment with Sodium Fluoride", *Genetics, Vol 48, pp307-310*.

**1971** Germany bans water fluoridation.

**1973** Netherlands bans water fluoridation.

**1974** The Safe Water Drinking Act is passed. Environmental Protection Agency (EPA) sets maximum contamination levels

(MCL) for various water pollutants, including sodium fluoride. The EPA sets the [fluoride](#) contamination level at an unbelievable 1.4 ppm for “warmer climates” and up to 2.4 ppm for “colder climates”. Furthermore, the American Dental Association begins pressuring the EPA to raise the MCL for fluoride in public water to 8 ppm, when it is fully known that systemic damage occurs below 1 ppm.

The National Drinking Water Advisory Council refuses to recommend raising the fluoride MCL, and came close to recommending its lowering. However, the EPA farmed out research work to ICAIR Life Systems, which issues a fraudulent report (confirmed by ICAIR employee Dr. John Beaver). The report is woven into the US EPA report on [fluoride](#), resulting in the EPA recommendation of MCL for sodium fluoride in public water to be 4 ppm.

**1975** Dr. John Yiamouyiannis publishes a preliminary survey which shows that people in fluoridated areas have a higher cancer death rate than those in non-fluoridated areas. The National Cancer Institute attempts to refute the studies.

Later in 1975, Yiamouyiannis joins with Dr. Dean Burk, chief chemist of the National Cancer Institute (1939-1974) in performing other studies which are then included in the Congressional Record by Congressman Delaney. Delaney was the original author of the Delaney Amendment, which prohibited the addition of cancer-causing substances to food used for human consumption. Both reports confirmed the existence of a link between fluoridation and cancer.

**1976** Dr. D.W.Allman and co-workers from Indiana University School of Medicine feed animals 1 part-per-million (ppm) fluoride and notice the urinary levels and tissue levels of a substance called cyclic AMP (adenosine monophosphate) increased by more than 100%. They also found that in the presence of aluminum in a concentration as small as 20 parts per billion, fluoride is able to cause an even larger increase in cyclic AMP levels.

**1977** The Congressional Subcommittee on Intergovernmental Relations convenes two (2) full Congressional Hearings on the subject of fluorides. During the hearing, it was proven that:

1. The “scientific efforts” of those promoting fluoridation were fraudulent, and
2. Other existing studies proved beyond a doubt that approximately 10,000 excess cancer deaths per year could be attributed to fluoridation in the United States.

**1977** Congressional representative L.H. Fountain, chairman of the 1977 Sub- Committee Hearings on Fluoride, states that “the carcinogenic nature of [fluoride](#) remains unanswered” and orders the U.S. Public Health Service (USPHS — who is in on the fluoride conspiracy anyway) “to conduct animal studies to see if fluoride causes cancer”.

Dr. Herman Kraybill, from the National Cancer Institute (who in 1972 had been chosen by NCI to write a memo saying that fluorides do not cause cancer) was placed in charge of these studies. Kraybill boldly states, “this will be the final study to confirm negativity of fluoride ions in carcinogenesis.” He cites 13 studies having nothing to do with the subject of fluorides and cancer in order to support his claim that “no link between fluorides and cancer existed.” (NCI Director Dr. Arthur Upton later admitted the 13 studies had nothing to do with the subject of the study). (See 1982, 1985,1988)

**1977** Congressional Hearings were held in which Dr.Yiamouyiannis and Dr. Burk were able to show that the increase in deaths were due to water fluoridation. At the conclusion of the hearings, Representative Fountain and his committee instructed the United States Public Health Service (well known by now for questionable and dangerous medical advisory practices which benefit the medical and pharmaceutical industries) to conduct animal studies to “determine whether or not fluoride causes cancer”.

**1978** The German magazine Stern reports on the Turkish village of Kizilcaoern, where the drinking water contains 5ppm fluorides. All of the children have brown teeth. Women produce dead babies after only four months of pregnancy. All the inhabitants suffer from tremendous premature aging. The same fluoride-related brittle-bone disorders have been observed among people drinking water with as little as 0.7 ppm fluoride.

**1978** A court case was won in Pennsylvania that proved fluoridation was harmful and resulted in a ban. It received great publicity, much to the concern of the American Dental Association and the industry. (See 1979)

**1979** In order to counteract the tide of truth on fluorides, the American Dental Association (ADA) issues a “white paper” on fluoridation. It characterizes opponents of public water fluoridation as “uninformed, self-styled experts whose qualifications for speaking out on such a scientific issue as fluoridation were practically nonexistent, or whose motivation was self-serving.”

**1979** The January 20th edition of the New York Times carries a story in which a child was killed because of a lethal dose of [fluoride](#) at a city dental clinic. The parents were awarded \$750,000.

**1979** Dr.W.L. Gabler and Dr.P.A.Long at the University of Oregon Health Sciences Center find that as little as 0.2 ppm fluoride in the body (the “safe” level for public water supplies is 1.0 ppm, 8 times higher) stimulates superoxide production in resting white blood cells. This seriously depresses the ability of white blood cells to destroy pathogenic agents. Superoxide in the bloodstream also gives rise to tissue damage and acceleration of the aging process. Ref: “Fluoride Inhibition of

Polymorphonuclear Leukocytes”, Journal of Dental Research, Vol 48, No.9, p1933-1939, 1979.

**1979** On November 11th, up to 50ppm fluoride was dumped into the Annapolis Maryland water supply, resulting in the poisoning of 50,000 people. Many died of heart failure during the week following the spill.

**1981** Dr.Robert Clark from the Boston University Medical Center shows that fluorides (as in fluoridated water supplies, toothpaste, etc) stimulate granule formation and oxygen consumption in white blood cells when they were not challenged with a foreign agent, but inhibited these processes when the white blood cell needed them to fight off foreign agents.  
*Ref: “Neutrophil Iodination Reaction Induced by Fluoride: Implications for Degranulation and Metabolic Activation” Blood, Vol 57, pp913-921, 1981.*

**1983** A symposium takes place at the University of Michigan after years of planning between the US Dept of Health and Human Services, the USPHS Michigan state health plans, the Kellogg Foundation, and Medical Products Labs. The purpose is to “discuss the status of organized opposition to fluoridation, to analyze probable motives influencing the anti-fluoride movement, to develop political and legal strategies for the defense and promotion of fluoridation, and to assess the need for a national fluoridation strategy.”

**1984** The 1984 issue of Clinical Toxicology of Commercial Products indicates that 1/10 oz of fluoride in the human body is lethal for a 100 pound adult human. Fluoride toothpaste contains up to 1mg/gram of fluoride. A whole tube contains about 199 mg of fluoride — enough to kill a 25-pound child. Tooth brushing causes ingestion of 0.25 mg/day.

**1984** Researchers in Japan were achieving some degree of understanding about fluorides consumption and human cancer. Dr. Takeki Tsutsui of the Nippon Dental College showed in 1984 that “fluoride caused not only genetic damage but was also capable of transforming normal human cells into cancer cells.”

In Dr.Tsutsui’s study, the level of fluoride used was the same level that the United States National Cancer Institute suggested should be used in a study to determine whether fluoridation of public water supplies causes cancer. The level of fluoride deemed “safe” by the United States in 1 ppm. The researchers in Japan found that cells treated with fluoride produced cancer.

**1985** Dental hygienists, psychiatrists, public relations experts, education specialists and psychologists (no scientists) form “The American Oral Health Institute” and release a book “Abuse of the Scientific Literature in an Antifluoridation Pamphlet”. In it they attack scientific data relative to fluoride and those who oppose its use in the public water supply. An examination of the book, ironically, revealed “abuse of scientific literature” on the part of the authors, who demonstrated their lack of scientific expertise and themselves were guilty of deception and misrepresentation of scientific fact.

**1989** On March 30, 1989, the California Department of Health Services reported that Niagara brand bottled water was found to contain 450ppm fluoride. The state health director, Kenneth Kizer, warned residents that consumption could be fatal.

**1989** Dr.Yiamouyiannis used the Freedom of Information Act to obtain carcinogenicity studies conducted by Proctor and Gamble (one of the makers of fluoridated toothpaste) that were submitted to (and covered up by) the United States Public Health Service.

These studies showed dose dependent cell abnormalities caused by fluoride. These results were reported in the February 22, 1990 issue of the Medical Tribune. Additional studies by Proctor and Gamble scientists confirmed the link between oral precancerous growth and fluoride, as well as an increase in osteomas (bone tumors) and osteosarcomas (bone cancer).

In fact, the National Cancer Institute found in 1991 that the incidence of bone cancer was 50% higher in men ages 0-19 years of age exposed to fluoridated water compared to those who were not.

**1989** A study by Hildebolt, et al. on 6,000 school children contradicts any alleged benefit from the use of sodium fluorides.

**1989** On February 23, 1989, Battelle released the results of its study of fluorides on mice. A most curious result of the study, from the USPHS point of view, was that fluoride induced the occurrence of an extremely rare form of liver cancer, called hepatocholangio carcinoma, in fluoride-treated male and female mice. Two months later in April of 1989, Battelle released the results of its study of fluorides and rats. The study showed a dose-dependent relationship between the incidence of oral cancerous tumors and fluorides.

As a response to the Battelle study, the National Cancer Institute from examined the incidence of oral cancer in fluoridated and non-fluoridated countries over the period from 1973 to 1987. The National Cancer Institute study found that as exposure to fluoridation increases, so does the incidence of oral cancer; sometimes as much as a 50% increase in oral cancer rates occur in fluoridated areas. This translates to 8,000 new cases of oral and pharyngeal cancer per year, needless pain and suffering and a financial windfall to the medical and pharmaceutical factions that concern themselves with treatment.

**1990** The National Toxicology Program issues a Press Release with data confirming findings of a link between fluoride and osteosarcomas as well as higher rates of oral cancer in rats. (January 1990)

**1990** The American Dental Association issues a Press Release which states “water fluoridation remains the safest, most effective, and most economical public health measure to reduce tooth decay.”

**1990** The National Toxicology Program in February 1990 releases its pathological data tables with a cover letter which, in a turnabout, claims “there has not been any evidence that shows a relationship between fluoridation and cancer or any other diseases in humans”, and “water fluoridation has proven highly effective in improving the nation’s dental health by markedly reducing tooth decay”.

The NTP final report, issued in March, omitted all studies which showed genetic damage from fluorides, and important studies showing that fluorides induce tumors and cancers were ignored. Kraybill, head of the NTP study, becomes a consultant to the American Council of Science and Health (ACSH), who threatens to sue the EPA if it “tries to undermine public confidence in fluoride.”

**1990** Dr. John Colquhoun in New Zealand is forced into early retirement in New Zealand after he conducts a study on 60,000 school children and finds no difference in tooth decay between fluoridated and unfluoridated areas. He additionally finds that a substantial number of children in fluoridated areas suffered from dental fluorosis. He makes the study public.

**1990** The September 14th issue of Newsweek reports that the study performed by Battelle Memorial Institute under Congressional mandate to look into fluorides and animal cancer (that found a connection) was refused for publication by the Journal of the National Cancer Institute.

**1992** Michael Perrone, a legislative assistant in New Jersey, contacts the FDA requesting all information regarding the safety and effectiveness of fluoride tablets and drops. After 6 months of stalling, the FDA admitted they had no data to show that fluoride tablets or drops were either safe or effective. They informed Perrone that they will “probably have to pull the tablets and drops off the market.”

# FLUORIDE DID YOU KNOW???

In 1955, Crest became the first fluoride toothpaste.

Fluoride calcifies the pineal gland, otherwise known as your 3rd eye which literally has rods and cones, just like your other eyes!

Fluoride is so toxic that it considered Hazardous Waste by the EPA.

Hitler fluoridated the water in the concentration camps to sedate the prisoners.

Fluoride is the same ingredient in rat poison and Prozac

According to Dr. Bill Osmunson, there's the same equivalence of fluoride in an 8 ounce glass of fluoridated tap water as there is in a "pea sized" amount needed to call the Poison Control Center, as recommended on the back of any fluoridated toothpaste.

### **Did You Know...**

Studies by Doctors H.S. Brown, D.R. Bishop and C.A. Rowan in the early 1980s demonstrated that an average of **64% of the total dose of waterborne contaminants, such as fluoride, are absorbed through the skin.** (*American Journal of Public Health 1984; 74: 479-84*) —*Fluoride: Drinking Ourselves to Death, Barry Groves, pp. 275-265*

Fluoride is so toxic, that if a 5 gallon bucket were to be dumped in the ocean, **it would kill all nearby sea life.**

A study by Professor Julian Andelman, Professor of Water Chemistry at the University of Pittsburg's Graduate School of Public Health, "found less chemical exposure from drinking the water than from using it to wash clothes or take a shower or a dip in the swimming pool". **Every time you take a shower or go for a swim, you will be soaking it up.** The percentage for skin absorption are as follows: Scalp — 32%, Ear Canal — 46%, Forehead — 36%, Plant of Foot — 13%, Forearm — 9%, Palm — 12%, Male Scrotum — 100%.

Dr. Dean Burk, Chief Chemist Emeritus of the National Cancer Institute published a paper in 1975 that detailed an **increase in cancer deaths in fluoridated areas.** According to Burk, "In point of fact, fluoride causes more cancer, and causes it faster, than any other chemical".

**Fluoride is NOT essential.** In 1979, the FDA required the deletion of all government references previously classifying fluoride as "essential or probably essential", (*Federal Register, March 16, 1979, page 16006*).

Robert Carton, PhD formerly President of the union of Government Scientists working at the US Environmental Protection Agency said: "**Water fluoridation is the greatest case of scientific fraud of this century, if not of all time.**" In 1997, more than 1,000 members of this union working at USEPA HQ in Washington DC, who are directly responsible for the US Safe Drinking Water Act, voted UNANIMOUSLY to ban water fluoridation. Their bosses are not listening.

**There is not a single scientific or laboratory study from anywhere in the world which proves that fluoridation reduces tooth decay in humans.** There are, however, hundreds of published scientific papers which show that water fluoridation is dangerous to human, animal, plant and aquatic life, which is no surprise, since fluoride is more toxic than lead and only marginally less so than arsenic. (*Clinical Toxicology of Commercial Products, 5th ed., Gosselin, et al, 1984.*).

"**Fluorides are general protoplasmic poisons,** probably because of their capacity to modify the metabolism of cells by changing the permeability of the cell membrane and by inhibiting certain enzyme system. The sources of fluorine intoxication are drinking water containing 1 ppm or more of fluorine, fluorine compounds used as insecticidal sprays for fruits and vegetables (cryolite and barium fluosilicate) and the mining and conversion of phosphate rock to superphosphate, which is used as fertilizer. The fluorine content of phosphate rock, about 25% of the fluorine present, is volatilized and represents a pouring into the atmosphere of approximately 25,000 tons of pure fluorine annually. The known effects of chronic fluorine intoxication are those of hypoplasia of the teeth, which has been called mottled enamel, and of bone sclerosis."

**Hitler's rumored connection to using fluoridated the water in Nazi prison camps.:**

“When the Nazis under Hitler decided to go into Poland, both the German General Staff and the Russian General Staff exchanged scientific and military ideas, plans, and personnel, and the scheme of mass control through water medication was seized upon by the Russian Communists because it fitted ideally into their plan to communize the world. ...

“I was told of this entire scheme by a German chemist who was an official of the great IG Farben chemical industries and was also prominent in the Nazi movement at the time. I say this with all the earnestness and sincerity of a scientist who has spent nearly 20 years` research into the chemistry, biochemistry, physiology and pathology of fluorine—any person who drinks artificially fluoridated water for a period of one year or more will never again be the same person mentally or physically.”

CHARLES E. PERKINS, Chemist, 2 October 1954

**Additionally:**

The first occurrence of fluoridated drinking water on Earth was found in Germany's Nazi prison camps. The Gestapo had little concern about fluoride's supposed effect on children's teeth; their alleged reason for mass-medicating water with sodium fluoride was to sterilize humans and force the people in their concentration camps into calm submission.

(Ref. book: “The Crime and Punishment of I.G. Farben” by Joseph Borkin.)

**Chemtrails now contain fluoride.** Researcher Dane Wigington recently stated that the last 60 water tests from Norway and Germany have contained fluoride in the results and is not the result from any industrial process or processing. It is interesting to note that **water fluoridation is not allowed in either of these countries.**

# FLUORIDE DID YOU KNOW???

1943: RESEARCHERS FROM THE US PUBLIC HEALTH SERVICE EXAMINE THE HEALTH OF RESIDENTS OF BARTLETT, TEXAS TO SEE IF THE 8PPM FLUORIDE IN THE DRINKING WATER WAS AFFECTING THEIR HEALTH. IT WAS CHECKED AGAIN IN 1953. THEY FIND THAT THE DEATH RATE IN BARTLETT WAS THREE TIMES HIGHER THAN A NEIGHBORING TOWN WHICH CONTAINED 0.4 PPM FLUORIDE.

1950: SOVIETS ADD FLUORIDES TO WATER IN PRISON SYSTEM TO MAINTAIN SUBSERVENCE IN THE INMATE POPULATION.

1954: C.E. PERKINS, I.G. FARBEIN CHEMIST, ADMITS FLUORIDE IS TO REDUCE RESISTANCE IN PEOPLE TO AUTHORITY.

1955: CREST BECOMES THE FIRST FLUORIDE TOOTH PASTE
